

Juniardy Setiowidayoga

Fullstack Engineer | Web3 & AI Specialist | Blockchain & MVP Expert

+62 823-3191-0228 • juuns99@gmail.com • <https://linkedin.com/in/juuns99> • Surabaya, Indonesia

SUMMARY

With 9+ years of experience, I've built products end-to-end across Web2 and Web3, turning early-stage ideas into functional, user-ready applications. My strength lies in crafting intuitive frontend experiences while architecting reliable backend systems when needed. I work mostly with React.js, Next.js, TypeScript, TailwindCSS, and modern frontend tooling, and I translate complex requirements into clean, maintainable interfaces that scale. On the backend side, I'm comfortable with NestJS, Prisma, PostgreSQL, and microservice patterns, allowing me to support fullstack delivery when required.

In Web3, I've shipped DEX tools, DeFi apps, prediction markets, and tokenization platforms using Viem, Ethers.js, Hardhat, Foundry, and Sui/Solana SDKs, several products earning grants and 2nd-place hackathon awards. I've also contributed to platforms serving 10K–100K+ users, improving performance, release pipelines, and API reliability across teams. Across all projects, I approach engineering with a product mindset, understanding user goals, making thoughtful technical decisions, and collaborating closely with designers, PMs, and founders to deliver outcomes that matter.

EXPERIENCE

Manexus Pte Ltd

Founding Engineer (Web3 & AI)

Singapore, Remote from Indonesia

Jan 2024 - Present

- Delivered 6 digital products and MVPs across Web2, Web3, and AI domains, including Fractal, Tenzro NFT, Satsouk, Kolektiva, Rishu, and EatCalorie Bot, within consistent 1-3 month development cycles.
- Led backend and system architecture for Rishu (DeFi app), covering API design, database modeling, blockchain integration, and deployment workflows.
- Built scalable applications using Nest.js, Next.js, Prisma, PostgreSQL, MongoDB, Docker, and various Web3 SDKs.
- Improved engineering speed by establishing reusable boilerplate templates, enabling faster setup and more consistent delivery across new projects.
- Streamlined release processes by implementing CI/CD pipelines, reducing manual deployment steps and improving reliability.
- Collaborated closely with founders and partners to turn product concepts into clear technical plans and execution workflows.
- Coordinated task planning for a small engineering team, ensuring smooth delivery and consistent coding standards.

Key Achievements:

- Produced a portfolio of 6 shipped products, strengthening Manexus' presence across Web2, Web3, and AI verticals.
- Achieved significant ecosystem recognition:
 - Satsouk → 2nd place at ICP Chain Fusion Hackathon

- Kolektiva → 2nd place at ETHSEA Lisk Hackathon
- Increased development speed by 10% through internal boilerplates, resulting in faster project spin-up.
- Improved deployment stability with CI/CD automation, contributing to more reliable, low-friction release cycles.
- Strengthened product execution by translating early concepts into technical plans, enabling consistent, on-time delivery across initiatives.

Moladin
Backend Engineer

Indonesia, Remote
Aug 2023 - Feb 2024

- Worked as a Backend Engineer under PT Skyshi Digital Indonesia, contributing to Moladin's engineering ecosystem of 100+ engineers and supporting the Dealer Financing platform serving 10K+ users.
- Developed and maintained backend services using Express.js, TypeScript, Sequelize ORM, and MySQL, enabling reliable loan processing and new feature delivery.
- Improved backend performance by implementing Redis caching and optimizing database queries, helping reduce response latency under peak usage.
- Strengthened service reliability by integrating Kafka as a message broker, ensuring stable communication across Moladin's microservices during concurrent transaction loads.
- Collaborated with frontend, QA, and internal squads to define API contracts and deliver smooth cross-team integrations.
- Performed debugging, testing, and performance tuning to maintain system stability during high-concurrency operational periods.
- Delivered features consistently within Agile/Kanban workflows, coordinating with vendor teams and internal engineering squads.

Key Achievements:

- Contributed to the scalability and stability of a 10K+ user financial platform, ensuring reliable loan processing under high traffic and operational load.
- Enhanced backend performance through Redis caching and query optimization, leading to faster response times and improved user experience during peak activity.
- Strengthened engineering collaboration across multiple squads, resulting in smoother feature delivery and fewer integration issues.
- Helped maintain platform stability during high-concurrency operations through systematic debugging, testing, and performance tuning.

Tentang Anak
Backend Engineer

Indonesia, Remote
Feb 2022 - Jan 2023

- Supported backend systems serving 100K+ active users, ensuring stable performance across parenting features and e-commerce flows during daily operational peaks.
- Improved platform stability by developing backend features using Laravel, Express.js, and NestJS, with emphasis on API reliability and maintainability.
- Enhanced API performance through Redis caching and query optimization, ensuring consistent response times during high-traffic periods.
- Upgraded search functionality with Elasticsearch, enabling fuzzy search, keyword matching, and related content recommendations for improved discoverability.
- Migrated backend services from Express.js to NestJS using DDD architecture, reducing technical debt and improving long-term scalability.

- Integrated external services such as Duriipay (payments) and Shipper (logistics) to support transactional and fulfillment workflows.
- Collaborated with outsourced teams to deliver the first-phase e-commerce modules on schedule.
- Worked closely with frontend engineers to define and refine API contracts, ensuring smooth cross-team integration.
- Delivered features consistently within SCRUM, maintaining clear visibility through daily standups and weekly reporting.

Key Achievements:

- Contributed to the stability and scalability of a platform serving 100K+ active users, ensuring reliable performance during high-volume daily operations.
- Improved overall API responsiveness through Redis caching, indexing, and optimization, resulting in more consistent performance under peak traffic.
- Enhanced content discoverability by implementing Elasticsearch, enabling better search relevance and faster user navigation across the platform.
- Reduced long-term maintenance costs and technical complexity by migrating core services to NestJS using DDD architecture, strengthening backend scalability.
- Supported successful rollout of e-commerce features by coordinating with outsourced teams and external vendors, enabling on-time launch of key transactional flows.
- Strengthened operational delivery by maintaining consistent output within SCRUM processes, ensuring predictable release cadence and strong cross-team alignment.

Ashr Technology **Backend Engineer**

Singapore, Remote from Indonesia
June 2021 - Sept 2021

- Built the core backend foundation for GameSoftBank, implementing essential product logic and supporting features required for its MVP release.
- Developed backend modules using Laravel Inertia and Vue.js, ensuring clean, maintainable, and scalable application structure.
- Implemented microservice components with Redis as a message broker, improving asynchronous workflow reliability and background processing performance.
- Designed and developed server-side logic using MySQL (Eloquent ORM), delivering APIs that enabled stable integration with frontend modules.
- Improved backend performance through Redis caching and optimized MySQL indexing, reducing query load and enhancing API responsiveness.
- Created and maintained automated cronjobs to handle expiry checks and scheduled operations, reducing manual workload and improving data consistency.
- Collaborated with cross-functional teams to clarify requirements and deliver features on time across the development cycle.

Key Achievements:

- Successfully contributed to the MVP launch of GameSoftBank by establishing a stable and scalable backend foundation.
- Improved system responsiveness and operational efficiency through Redis caching, message brokering, and optimized database indexing, resulting in faster API performance and smoother background operations.
- Reduced manual operational overhead by implementing automated cronjob workflows, ensuring more consistent and error-free scheduled processes.
- Strengthened delivery reliability by aligning closely with product, frontend, and cross-functional teams, enabling on-time feature releases within the development cycle.

Nalar Naluri
Full Stack Engineer

Surabaya, Indonesia
Aug 2019 - June 2021

- Took ownership of 2 internal company products, handling full-stack development across backend, frontend, and deployment workflows.
- Delivered 5+ client projects using Laravel, Express.js, and Adonis.js, ensuring maintainable, scalable, and production-ready codebases.
- Designed and implemented server-side logic with MySQL and PostgreSQL, building APIs that supported both web and mobile integrations.
- Developed real-time features using Firebase push notifications, enhancing user engagement and responsiveness across platforms.
- Integrated backend services with React.js and Vue.js frontends, improving alignment between backend and UI teams.
- Optimized application performance and stability by resolving issues during client deployments and ensuring smooth release cycles.
- Collaborated with cross-functional teams to gather requirements, propose technical solutions, and align development work with business needs.

Key Achievements:

- Successfully delivered multiple production-ready client projects, contributing to stronger product reliability and better developer, client satisfaction.
- Enhanced cross-platform user engagement by implementing real-time features, resulting in more responsive and interactive user experiences.
- Improved release quality and system stability during client deployments, ensuring smoother launches and fewer post-release issues.
- Strengthened development alignment across backend and frontend teams through effective API integration and collaboration, leading to faster feature delivery and reduced miscommunication.
- Supported business outcomes by translating requirements into actionable technical solutions that aligned with client objectives and project constraints.

Intive Studio
Full Stack Engineer

Indonesia, Hybrid
Nov 2018 - Aug 2019

- Delivered 5+ client projects end-to-end using Laravel and CodeIgniter, typically completing each within 1-2 month delivery cycles.
- Built full-stack features and backend logic with MySQL and PostgreSQL, enabling reliable API communication and stable data processing across client systems.
- Improved data management workflows by migrating file storage to AWS S3, eliminating dependency on client servers and ensuring centralized, consistent asset handling.
- Implemented real-time notifications using Firebase, enhancing user engagement and responsiveness across applications.
- Collaborated with clients and project managers to gather requirements, define technical solutions, and maintain clear communication throughout development.
- Supported deployment and post-release improvements, contributing to long-term system stability and maintainability for client applications.

Key Achievements:

- Delivered multiple production-ready client applications with predictable 1-2 month cycles, contributing to faster time-to-market for client businesses.
- Enhanced system reliability and performance through AWS S3 centralization, resulting in more

consistent asset management and reduced server-related issues.

- Improved user experience across projects by implementing Firebase real-time notifications, enabling faster feedback loops and better engagement.
- Strengthened client satisfaction by maintaining clear communication and providing stable post-release support, leading to smoother launches and more maintainable applications.
- Enabled more efficient collaboration and delivery by translating client requirements into actionable technical solutions aligned with business needs.

PT Inosoft Trans Sistem
Backend Engineer

Indonesia, Hybrid
May 2016 - June 2018

- Built and maintained a School Management System used by 100 schools, supporting tens of thousands of students, teachers, and administrators across multiple academic periods.
- Developed backend modules using CodeIgniter, Express.js, PostgreSQL, and MongoDB, ensuring reliable data processing and a scalable multi-tenant architecture.
- Created Simantiz, an internal real-time multiplayer board game using Express.js and Socket.io, showcasing early adoption of real-time system capabilities.
- Designed and delivered REST APIs powering student management, attendance, reporting, and administrative workflows, supporting smooth daily operations in schools.
- Improved system stability by optimizing database queries, tuning performance, and implementing structured debugging workflows to reduce operational issues.
- Collaborated with senior engineers and tech leads to define implementation plans, align technical decisions, and consistently meet weekly development goals.

Key Achievements:

- Contributed to the long-term success of a large-scale education platform used across 100 schools, supporting tens of thousands of active users with reliable daily operations.
- Enhanced platform performance and stability through optimization and structured debugging, resulting in fewer operational issues and smoother academic workflows.
- Demonstrated early technical innovation by building Simantiz, a real-time multiplayer game, showcasing proficiency in real-time architecture before it became mainstream.
- Strengthened engineering execution by consistently aligning technical decisions with senior engineers and tech leads, enabling the team to meet weekly development targets reliably.
- Improved data integrity and API reliability, contributing to more accurate reporting and streamlined school administration processes.

PROJECT

Rishu

rishu.xyz

Rishu (DeFi Apps) that working on katana blockchain, make user buy & sell meme tokens from mobile phones.

Satsouk

satsouk.xyz

AI Social Prediction Market like Polymarket running on BOB chain.

Kolektiva

kolektiva.properties

RWA based fractional property running on Lisk blockchain.

Contendo

contendo.co.uk

Social media for sports like instagram where user can do live play with others and make sport feeds.

Moladin Dealer App

moladin.com

Moladin is a platform for dealer to ask loan for purchase cars.

GameSoftBank

gamesoftbank.com

Game marketplace platform that runs on Singapore, user can buy & sell their game with systems like eBay.

Tentang Anak

tentanganak.com

Parenting apps that help to track child growth, with the help of experts, also have e-commerce to supply daily needs.

Skill

- **Frontend Engineering:**
TypeScript, React.js, Next.js, TailwindCSS, Zustand, TanStack Query, React Hook Form, Zod, Component-Driven Development, Pixel-Perfect Implementation, API Integration, Performance Optimization, Responsive UI/UX, Frontend Architecture
- **Fullstack & Backend Development:**
Node.js, NestJS, Express.js, Laravel, AdonisJS, CodeIgniter, Prisma ORM, Sequelize ORM, Eloquent ORM, PostgreSQL, MySQL, MongoDB, Redis, REST API Development, Microservices Architecture, Domain-Driven Design (DDD)
- **Web3 & Blockchain Engineering:**
Solidity, Hardhat, Foundry, Viem, Ethers.js, Thirdweb SDK, Rainbowkit, Privy, Sui SDK/CLI, Solana SDK, Move, Web3 Integration, Smart Contract Development, On-chain Indexing
- **DevOps & Infrastructure:**
Docker, GitHub Actions, CI/CD Pipelines, Nginx, Caddy, Komodo, AWS S3, Supabase, Firebase, Auto Deployment, VPS Setup, Infrastructure Optimization, Logging & Monitoring
- **AI & Automation:**
AI Integration, Workflow Automation, LLM Features, Rapid Prototyping
- **Engineering Management:**
Technical Leadership, Team Collaboration, Project Management, Resource Planning, Requirement Analysis, Roadmap Execution, Stakeholder Communication, Engineer Mentoring, Ownership & Accountability
- **Product & Delivery Skills:**
Product Thinking, MVP Delivery, Cost Estimation, Timeline Planning, Spec Documentation, Release Management, Client Communication, Strategic Execution
- **Leadership & Ownership:**
Initiative Leadership, Clarity Driving, Technical Decisions, End-to-End Delivery, Outcome Ownership, Engineering Direction

- **Product Mindset (User-Focused Delivery):**
User Value Focus, Product Insight, Feasibility Balance, Requirement Mapping, UX Improvement, Roadmap Planning
- **Cross-functional Collaboration:**
Clear communication, design alignment, product alignment, features alignment.
- **Other Soft Skills:**
Communication, Adaptability, Strategic Problem Solving, Mentorship, Remote Collaboration, Accountability
